PROFESSIONAL PROFILE

Frontend & Software Developer with 3+ years of project-based experience since 2023, building responsive web applications, automation systems, interactive software, and data-backed digital products. Experienced across the full delivery cycle: translating user needs into clear flows, designing interfaces and application logic, implementing persistent state and background processes, validating data, testing edge cases, setting up CI checks, and deploying or packaging releases. Strong frontend focus with practical depth in React, TypeScript, JavaScript, Python, SQL/SQLite, software quality, and product analysis.

CORE EXPERTISE

Frontend Development: React, TypeScript, JavaScript ES6+, HTML5, CSS3, React Router, Vite, React Hooks, component-based architecture, responsive and mobile-first UI, DOM/BOM, localStorage, Sass, Tailwind CSS, Bootstrap

Interactive UI & Web Quality: Three.js, Framer Motion, Lenis, design-to-code, visual hierarchy, accessibility fundamentals, reduced-motion behavior, SEO fundamentals, Chrome DevTools

Software & Automation: Python, Aiogram 3, Telegram Bot API, APScheduler, background jobs, notifications, web scraping and parsing, modular architecture, JSON, configuration and environment handling

Data & APIs: SQL, SQLite, REST/API concepts, request-response flows, persistent state, data validation, consistency and completeness checks, anomaly investigation

Testing & Delivery: manual, functional, UI, smoke and regression testing; test scenarios and edge-case analysis; pytest, Vitest, Playwright, Lighthouse CI, GitHub Actions, GitHub Pages, PyInstaller, release validation

Product & System Analysis: user flows, user stories, use cases, business rules, acceptance criteria, UML (Use Case, Activity, Class, Sequence), BPMN basics, AS-IS / TO-BE thinking, technical documentation

PROJECT-BASED SOFTWARE DEVELOPMENT | 2023-PRESENT

Independently plan, build, test, document, deploy, and maintain projects across frontend development, automation, data workflows, and interactive software.

Trendyol Price Tracker | Product Development, Automation & Data Workflows | 2023-Present

Tech: Python, Aiogram 3, SQLite, SQL, APScheduler, Telegram Bot API, pytest, web scraping, localization | [Repository](#) | [Live Bot](#)

- Built and maintained a multilingual Telegram price-tracking product with subscriptions, watchlists, product cards, price history, target-price and discount alerts, quiet hours, grouped notifications, comparison and export flows, and persistent SQLite-backed state.
- Designed end-to-end user and admin workflows for adding product links, managing watchlists, viewing statistics, configuring alerts and notification modes, exporting or importing data, handling invalid, duplicate, and no-price cases, and controlling core functions through a full admin panel.
- Implemented scheduled background checks, scraping and fetch fallbacks, notification logic, anti-spam controls, backups, diagnostics, health and readiness checks, and localization for Azerbaijani, Russian, and Turkish.
- Structured the codebase into handlers, services, database modules, scraper helpers, localization resources, scheduler jobs, tests, and runtime configuration instead of a single-script prototype.
- Worked with SQL and SQLite logic for users, subscriptions, price history, alert settings, current/minimum/maximum/average prices, data-point counts, 90-day statistics, trend detection, and data-integrity checks.
- Maintained pytest-based checks and release validation covering runtime readiness, locale keys, commands and callbacks, database functions, scraper helpers, subscription flows, and notifications.

Nar Patisserie | React E-commerce Frontend | 2026

Tech: React, React Router, Vite, JavaScript, CSS, localStorage | [Repository](#) | [Live Demo](#)

- Built a responsive e-commerce frontend with Home, Catalog, Product Details, Cart, and Contacts pages, reusable product cards, category navigation, and recruiter-ready project delivery.
- Implemented product search, filtering and sorting, recommendations, favourites, cart quantity management, price formatting, and localStorage persistence across reloads.
- Organized the application around React components, routing, custom hooks, utilities, product data, UI states, and clear separation between page-level and reusable logic.
- Validated cart totals, routes, persistence, responsive behavior, empty and invalid states, and end-to-end user flows before publishing the project through GitHub Pages.

Personal Developer Portfolio | Interactive Frontend & Quality Workflow | 2025-Present

Tech: *React, TypeScript, Vite, Three.js, Framer Motion, Lenis, Vitest, Playwright, Lighthouse CI, GitHub Actions* | [Repository](#) | [Live Site](#)

- Built and deployed a personal project platform that evolved from a multi-page TypeScript website into an interactive React and TypeScript portfolio.
- Designed structured project storytelling, responsive navigation, interactive states, animation and 3D experiences with Three.js, Framer Motion, and Lenis, including reduced-motion behavior.
- Organized project pages, reusable UI, assets, typed modules, metadata, sitemap, robots.txt, and web-manifest details for clear recruiter-facing discovery.
- Added type checks, Vitest, Playwright, Lighthouse CI, and GitHub Actions to validate routes, UI behavior, accessibility and performance fundamentals, and deployment output.

Blaster Game | Python/Pygame Desktop Application | 2024-Present

Tech: *Python 3.11, Pygame, JSON, pytest, PyInstaller, PowerShell* | [Repository](#)

- Built a 2D arcade shooter with animated menus, adaptive settings UI, 16:9 scaling, fullscreen support, FPS controls, difficulty options, ship and weapon selection, high scores, and persistent settings.
- Implemented gameplay and application-state logic for waves, boss phases, enemy attack runs, pause and resume, replay and death replay, and visual quality presets.
- Tested keyboard and mouse controls, state transitions, JSON user-data persistence, legacy-data migration, packaged behavior, and regression-prone settings with pytest and manual checks.
- Created a PowerShell release workflow that runs checks, packages the Windows executable with PyInstaller, assembles a release ZIP, and generates SHA256 checksums.

ADDITIONAL CAPABILITIES

Tools & Collaboration: Git, GitHub, VS Code, Postman basics, Jira and Azure Boards basics, Agile/Scrum workflow awareness, Linux/Unix terminal basics, PowerShell

Analytics & Reporting: Excel formulas, filters, sorting, PivotTables, charts, XLOOKUP/VLOOKUP, SUMIF/COUNTIF, data validation; Power BI, Power Query, and simple DAX fundamentals

Engineering Strengths: end-to-end ownership, modular code organization, debugging, technical documentation, README and case-study writing, user-state and edge-case thinking, clear developer-QA-business communication

EDUCATION & TRAINING

Azerbaijan State Oil and Industry University | B.Sc. in Information Technologies (in progress) | Baku | 2023-2027 | Expected graduation: 2027

Relevant academic base: Web Systems, Software Development, Object-Oriented Programming, Human-Computer Interaction, Information Management, Artificial Intelligence, databases, and multi-semester UML and system-modeling practice.

IT Brains | Frontend Development Program | 2025-2026

React-based final project: Nar Patisserie.

DIV Academy | Full-Stack Development Coursework | 2025

Winner, #GeleceyiYazanlar / #GələcəyiYazanlar project.

Holberton School Azerbaijan | Software Engineering Training

100% schedule achievement.

ACHIEVEMENTS

- Winner, #GeleceyiYazanlar / #GələcəyiYazanlar project by DIV Academy.
- 100% schedule achievement - Holberton School Azerbaijan.
- Built a public project portfolio with documented repositories, automated checks, live deployments, and packaged release workflows.
